DETAILED ACTION

Status of the Application

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 15, 2008 has been entered.

Claim(s) 17, 20, 21, 23, 25-28, and 30 are pending and are examined herein.

In view of Applicant's amendments with respect to the 112 1st rejection with regard to prophylaxis, the rejection is hereby withdrawn.

Applicant's arguments with respect to the 103(a) rejection of claims 17, 20, 21, 23 and 25-30 as being unpatentable over Place (US Patent 6,117,446) in view of Yamazaki (*Archive of Biochemistry and Biophysics*, 1997) have been fully considered but found not persuasive. Applicant is arguing based on amended claims.

The new rejections are included in the office action below.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17, 20, 21, 23, 25-28, and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Place (US Patent 6,117,446) as evidenced Yamazaki (*Archive of Biochemistry and Biophysics*, 1997).

Place teaches a buccal drug delivery system that may be used in female hormone replacement therapy, in female contraception and to treat female sexual dysfunction (abstract). Place teaches that the pharmaceutical compositions comprise a therapeutic amount of an androgenic agent, a progestin, an estrogen, and a bioerodible polymeric carrier (column 4, lines 4-11).

Place further teaches that the buccal dosage units are in the form of tablets in amounts of 0.1 to about 2.5 mg of the selected androgenic agent, preferably testosterone or a testosterone ester, about 300 to 5000 μ g progestin and about 50 to 500 μ g estrogen.

Furthermore, Place teaches that among a number of androgenic agents that may be employed, naturally occurring androgens and derivatives thereof may also be used in the formulations (column 7, lines 11-15), specifically, testosterone (column 7, line 28).

As evidenced by Yamazaki, 15-hydroxytestosterones are naturally occurring androgens in the body. Specifically, Yamazaki teaches that when testosterone is exposed to liver microsomes or recombinant P450 enzymes, 15 α and β -hydroxytestosterones are identified as metabolites (page 167, Table III).

Thus, testosterone, the precursor to 15-hydroxytestosterone, as evidenced by Yamazaki, anticipates the instant claims.

Conclusion

Claims 17, 20, 21, 23, 25-28, and 30 are not allowed.
